

Burglary and Inferno Sound Barrier

The Filborna school in Helsingborg, Sweden, have had extensive burglary problems at their computer halls. Svagströmsservice Secur AB upgraded the school's existing alarm system with Inferno Sound Barrier and Strobe Light during August this year. The 25:th of September they had a burglary, nothing was stolen.

“At 23:20 the 25:th of September we had a burglary. First they smashed a window in the entrance hall, and then broke a second window to an adjacent room” says Heinz Frohm, Headmaster at the Filborna school. “The burglars fled without a thing. My conclusion is Inferno and Strobe Light was too much. This was an excellent investment”, continues Heinz Frohm.

“It's never funny when our clients is exposed for burglary”, says Johnny Håkansson, Managing Director at Svagströmsservice Secur AB. “But obviously we are happy that our proposed solution with Inferno Sound Barriers and Strobe Lights did their job. We can definitely recommend Inferno for those seeking active protection.”

“Due to nothing was stolen and the destruction was minimal, putting it all in order was quick and simple”, continues Heinz Frohm.

“Our different Inferno solutions suits all kinds of environment and applications”, says Johan Sandberg Managing Director at Indusec AB. “It is the wish to actually do something against attempts to burglary and the consequences thereof”.

Indusec is the world leader in high efficiency and advanced audio security products. The products are marketed under the name of Inferno and are installed at places or objects where a high security level is wished.
